

Roller Shade Options

Hardwired Motorized Roller Shade

This roller shade is operated by a 110-volt AC 4-wire motor. It requires the motor to be hardwired or installed such that the power supply must be fixed and permanent. In other words, wires from a power source within the wall must be connected by a licensed electrician so that the motor receives a constant power supply at all times. At the push of a button from all of the following options, shades can be rolled up, exposing a room to sunlight, or down, filtering light from entering a room:

- Paddle Wall Switches
- Hand Held Remote Control Transmitters
- Wall Mounted Key Pads
- Customizable Touch Screen Key Pads
- 24-Hour Timers
- Sun & Wind Sensors
- Home Automation or Computer System Interfaces

The electronic controls for hardwired motorized roller shades are capable of operating a shade individually, as sub-groups, and/or as an entire group. Please consult Mariak technical support with any questions you may have.

Minimum Width: 28"
 Maximum Width: 240"
 Minimum Height: 24"
 Maximum Height: 240"

Hardwired Standard Motorized Roller Shade Surcharges:
